

Draft FPP Change Form

9/14/07

Change Request Number:

Date: 1/31/2008

Proposed by: Bonneville Project Fisheries

Location of Change

BON 2.4.3.1.b (everything to be relabeled as necessary)

Proposed Change:

As per the procedures in **Bonneville Operating Order 14**, each spill gate will be raised and lowered, to test for operability and check calibration, prior to the start of spill season (usually in March).

Reason for Change:

This is done each year to ensure the gates are operable and properly calibrated. By including this in the FPP we can reduce the need to coordinate routine activities.

Comments from others:

Record of Final Action:

Language added as proposed.
